SUMMARY

Cybersecurity professional with hands-on experience in security engineering, automation, threat detection, and vulnerability management. Skilled in implementing and managing security tools and controls to strengthen enterprise security posture and reduce risk exposure. Experienced in monitoring, analyzing, and responding to security events using SIEM, EDR, and cloud security platforms. Proficient in identifying and remediating vulnerabilities through continuous assessment and patch management. Adept at developing and optimizing detection rules, use cases, and incident response processes. Collaborates effectively with cross-functional teams to support compliance, cloud security, and Zero Trust initiatives.

EXPERIENCE

Ingram Micro | Pune, India | July 2022 – Present

Professional Security Engineer - L2 | March 2026 – Present

- Worked on building and improving detection and automated response workflows in Microsoft Sentinel and Rapid7 Insight IDR using Insight Connect, helping streamline parts of the incident response process.
- Developed KQL queries and Python-based detection logic in MDATP and CrowdStrike, which helped reduce 90% of the alert noise and improve the quality of alerts.
- Supported forensic investigations and ransomware-related assessments using MDATP, Crowdstrike and Rubrik, contributing to root cause analysis and recovery efforts.
- Used Axonius to improve visibility of assets across the environment, helping identify unmanaged systems and support alignment with Zero Trust practices.
- Contributed to the vulnerability management process using Tenable SC/IO by tracking remediation and helping prioritize fixes based on risk.
- Wrote Python scripts to automate security agent checks and assist with reconciling data across different systems for executive-level reporting.
- Worked across multiple security tools such as Axonius, Rapid7, and MDATP as part of day-to-day security operations and improvement initiatives.

Associate Professional Security Engineer - L1 | July 2022 – February 2026

- Monitored real-time security alerts across Microsoft Sentinel, Rapid7 Insight IDR, and CrowdStrike to identify potential threats and escalate them appropriately for further investigation.
- Performed initial log analysis and incident triage, documenting findings and validating alerts to support the broader incident response process.
- Supported vulnerability management efforts using Tenable IO and SC by identifying issues, tracking remediation, and validating applied patches.
- Managed the deployment and health of security agents, including FireEye HX and Rapid7, to maintain consistent endpoint coverage and visibility.
- Monitored Cisco Umbrella and Rubrik dashboards to identify unusual network activity and help ensure the reliability of backup systems.
- Created and maintained security dashboards and documentation to support consistent incident handling and provide visibility into SOC performance.

PROJECTS

Enterprise-Wide 1Password Deployment, Ingram Micro

- Led the deployment of 1Password across the organization, working closely with the cybersecurity team to handle integration, rollout, and ongoing support.
- Helped implement centralized password management and secure authentication practices, improving credential security, reducing risk, and driving strong user adoption.

Data Exfiltration: A Case Study Using Digital Forensics Methodology, Ingram Micro

- Implemented a cloud-based security analysis toolkit at Ingram Micro to support incident response and investigation activities.
- Leveraged cloud platforms to improve scalability and performance, enabling more efficient threat analysis and handling.
- Integrated cloud-native tools into existing security workflows to streamline investigations and reduce response time for security incidents.

End-to-End Migration of Security Tools from On-Premises to Cloud, Ingram Micro

- Handled the end-to-end migration of multiple security tools from on-premises environments to the cloud ensuring minimal downtime and no disruption to critical operations.
- Planned and executed migration activities, including testing, validation, and rollback procedures to ensure a smooth transition.
- Improved system scalability and availability through successful cloud adoption, contributing to better overall security performance.

SKILLS

SIEM Rapid7 Insight IDR, Microsoft Sentinel
SOAR Rapid7 Insight Connect
EDR Crowdstrike, MDATP, FireEye HX, Rapid7 Agent
Vulnerability Management Tenable SC and IO
DNS Security Cisco Umbrella
Data Protection & Ransomware Investigation Rubrik
Cybersecurity Asset Management Axonius
Scripting and Automation Python, Bash
Security Optimization Incident Response, Threat Detection, Security playbooks, Malware Analysis, Phishing Analysis, Log Analysis, Threat Hunting

CERTIFICATIONS

Proofpoint Certified AI Data Security Specialist, Proofpoint	Jan 2025
Proofpoint Certified Email Authentication Specialist, Proofpoint	Jan 2025
Penetration Testing Professional Certificate, Cybrary	Dec 2024
Certificate of Cloud Security Knowledge - CCSK, Cloud Security Alliance	Nov 2024
MTA: Security Fundamentals - Certified, Microsoft	Oct 2021

EDUCATION

B.E in Computer Science, Shri Shankaracharya Technical Campus	Jul 2018 - Jul 2022		Bhilai
---	---------------------	--	--------
